

Developing Skin Products That Soothe and Heal Skin Naturally

Dermaka was first developed by Ronald Bush, MD, FACS and Peggy Bush, APRN, for bruising and redness that occurs after surgical procedures. It soon became evident that many conditions that affect the skin could be treated with Dermaka cream. From there, The Bush's have focused their efforts on continuing to develop all-natural skin products that soothe, heal and protect the skin.

DISCOVER THE
DERMAKA DIFFERENCE

Skin Cream and Sunscreens

Skin Cream

THE ORIGINAL DERMAKA CREAM

An all-natural moisturizer that contains plant extracts which are clinically proven to aid in skin healing and reduction of bruising. Ideal for pre and post surgery and to help with skin inflammation or redness.

Developed by renowned surgeon Ronald Bush, MD, FACS, Dermaka cream is made of natural plant extracts with added vitamins essential for skin health.

I have used top-of-the-line dermatology products, creams and lotions and I have never seen a product with more pure ingredients where every ingredient was targeted for a purpose not just for marketing. I noticed an immediate difference in my skin. I love both the sunscreen and the skin cream and I'm recommending it to everyone that I know. - Lynne R.

ARNICA MONTANA

Helps to decrease bruising

Sunscreen

NOW AVAILABLE TINTED & UNTINTED

Dermaka Broad-Spectrum SPF 42 Sunscreen is a lightly tinted mineral based Sunscreen that can be used daily. Formulated with natural plant extracts that are known to aid in healing damaged skin as well as provide sun protection. The tinted formula helps reduce the appearance of fine lines and skin blemishes. Dermaka Sunscreen can be used on all skin types and after minor noninvasive cosmetic and aesthetic procedures.

I use [Dermaka Sunscreen] as my foundation with powder on top. It's non-greasy and non-comedogenic. This one doesn't clog my pores. It glides easily when applied. A little goes a long way! - Bebe Peja, MD
